

Peer-review policy

Peer review is the system used to assess the quality of a manuscript before it is published. Reviewers selected by the editor in chief assess submitted manuscripts for originality, validity and significance to help Editors in Chief to determine whether the manuscript should be published in the Journal of Cancer Stem Cell Research. Authors may read more about the peer-review process.

Journal of Cancer Stem Cell Research operates a single-blind peer-review system, where the reviewers are aware of the names and affiliations of the authors, but the reviewer reports provided to authors are anonymous. The benefit of single-blind peer review is that it is the traditional model of peer review that many reviewers are comfortable with, and it facilitates a dispassionate critique of a manuscript.

Submitted manuscripts will generally be reviewed by two or more experts who will be asked to evaluate whether the manuscript is scientifically sound and coherent, whether it duplicates already published work, and whether or not the manuscript is sufficiently clear for publication. The Editor in chief will reach a decision based on these reports and, where necessary, they will consult with members of the Editorial Board.
